

↑Not just skates, it's fitness on Wheels!

To address many significant issues with schools reopening and how it relates to Skatetime®, the following represents the heightened protocols we have in place in addition to our normal operating and sanitization practices. We have done a lot of research and given this a lot of thought and the following have been implemented effective June 1st, 2020;

1. Our employees will be temp tested & questioned about health issues, previous activity & interaction daily when arriving to work.
2. Our employees will maintain distancing in and out of our offices. Whether at school, shopping or at lunch etc....
3. Our employees will follow CDC guidelines using barriers and masks while at work and handling gear.
4. All gear, porous and non-porous is sanitized with a Tuberculocidal type spray before and after being used.
5. All vehicles and delivery equipment are sanitized daily using spray, sanitary wipes and hand sanitizer before departure and between stops.
6. Skatetime® has always provided disinfectant spray as part of our toolbox in the past. It has always been at the educator's discretion to apply this spray between classes & use. We are intentionally vague in regard to "between class" protocols due to the unique and specific needs of each school. **We would like the opportunity to discuss more detailed options that will be customized to you and your particular situation.** We do have a variety of sanitization methods we can recommend to support the implementation of what will satisfy your needs and concerns completely.

As a reminder, skating is a co-ed "individualized" activity that not only provides a variety of health, wellness and fitness benefits but also, in these times, provides an acceptable level of "social distancing".

Remember to stay safe & wash those hands...just not of us.

.....rolling right into your gymnasium...safely!
